

# Cloud-Based & Integrated With Your ERP.

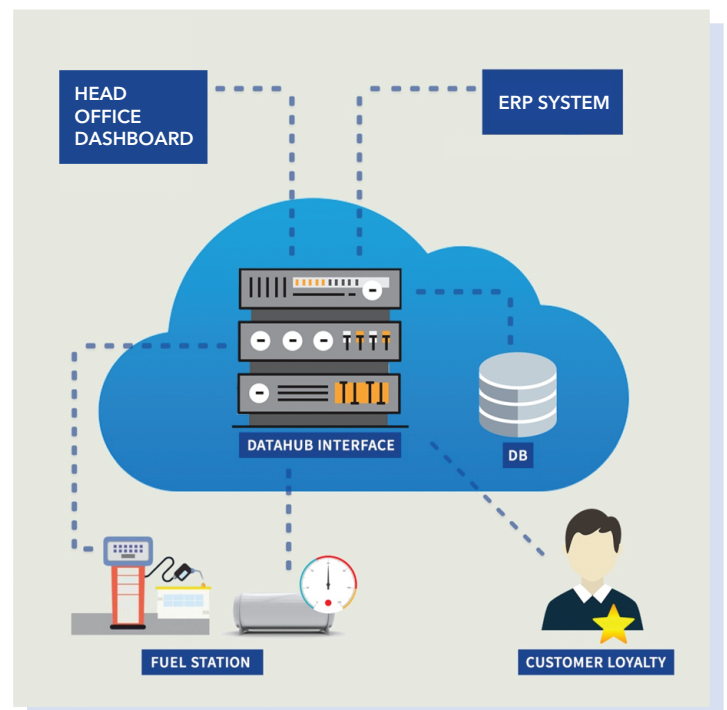

# FUEL STATION SYSTEMS

**We integrate & deploy cloud-based fuel station management systems in Asia.**

Our system integrates with your central data hub for efficient management and distribution of petroleum and petroleum products through your network of fuel stations. The system has the following key components that enable your head office to introduce efficiency to the downstream supply chain.

The system comprises four components:

- 1:** *Cloud-based Data Management Console that gathers all information*
- 2:** *A Customer Loyalty Program (CLP) to track individual sales transactions*
- 3:** *Fuel Pump Monitoring Console that electronically registers fuel sales and Fuel Tank Console that electronically monitors fuel tanks, registers fuel deliveries, and detects leaks*
- 4:** *A cloud-based Fuel Station Management System (FSMS) for individual fuel stations to manage fuel pumps and fuel tanks, administer the customer loyalty program, and electronically process fuel orders via an internal POS*

**Bring us your challenge.**
